Surround Grille Measurements

How to Measure for Surround Grilles

- To measure **Daylight Opening (DLO)**, measure the visible glass, from stop to stop.
- To measure the **Tip-to-Tip** dimension, measure the longest part of the surround (perimeter) portion of the grille, on the top of the profile (the portion that faces outward from the glass).
- To measure the **Underneath** dimension, measure the shortest part of the surround (perimeter) of the grille, on the bottom of the profile (the portion that touches the glass).
